EDUCATION

Uppsala University

MSc Information and Computer Engineering, Specialization in Software Engineering

Uppsala, Sweden

Sep. 2021 – Jan. 2026

EXPERIENCE

Ica Ugglebo

June 2018 – June 2019

Ockelbo

PERSONAL PROJECTS

Habit Tracker - Streaky | Flutter, SQLite, Provider

2022 – Actively Maintained

- <https://apps.apple.com/lt/app/habit-tracking-streaky/id6446580223?platform=iphone>
- Achieved 2000 active users on both iOS and Play Store, along with over 120000 SEK in revenue
- Fully developed and released a Flutter application on iOS
- Implemented local data persistence using SQLite, allowing offline access
- Optimized performance through profiling and switching to Provider for state management, greatly increasing performance
- Implemented A/B testing through RevenueCat, increasing sales by 30 percent

Workout App – Compound | Flutter, AWS S3, SQLite

May 2023 – On Hold

- Designed and implemented a modern UI following Material 3 design principles for improved user experience
- Utilized BLoC state management to ensure scalable and maintainable app architecture
- Integrated AWS S3 to host and retrieve assets, bypassing Play Store app size limitations
- Developed and maintained a complex relational database schema using SQLite for offline data persistence

UNIVERSITY PROJECTS

Parallelized Power Method | C, OpenMPI, Slurm

June 2025 – June 2025

- Implemented a distributed Power Method using MPI to estimate dominant eigenvalues of large sparse matrices
- Optimized matrix storage with CSR format and parallelized computation across nodes reaching 10x Strong Scaling Speedup
- Benchmarked performance on HPC cluster using Slurm

Board Game - MindMGMT | Java, LibGDX

Nov 2024 – Jan 2025

- Designed and implemented an interactive highlight grid to visually display valid player moves on the game board
- Developed a modular Action-Controller system to manage player interactions and core game mechanics
- Resolved various in-game call-to-action triggers to ensure responsive and intuitive gameplay flow

Recipe App - MunchTime | Flutter, Python, Firebase

Mars 2022 – June 2022

- Implemented core in-app navigation to support seamless user flow across key screens
- Integrated Firebase Authentication to enable secure user login and account management
- Designed and built key UI components, including the Recipe page, Group page, and bottom navigation bar
- Connected the application to Firebase backend services for real-time data access and storage

Quizz Game - Quizzzy | React, Node.js, Redis, Javascript, Docker

Jan 2024 – April 2024

- Designed and implemented multiple front-end pages
- Successfully integrated back-end REST api into React with axios
- Made various pages responsive with goal of turning the website mobile

TECHNICAL SKILLS

Languages: Java, Python, C, C++, .Net, SQL (Postgres, MySQL, SQLite), JavaScript, TypeScript, HTML/CSS, Dart,

Frameworks: React, React Native, Node.js, Material-UI, Tailwind, Flutter

Tools: Docker, Git, Firebase, AWS (S3), Figma

Libraries: OpenMP, PThreads, OpenMPI, Pandas, NumPy, Matplotlib
